EDUCATION

Texas A&M University, College Station

Master of Science in Artificial Intelligence

Fall 2026

Aug 2026 – Apr 2028

Indian Institute of Information Technology Vadodara

B.Tech. in Computer Science & Engineering

CGPA: 8.37/10

Jul 2020 – Jun 2024

EXPERIENCE

Graviton Research Capital | *Quant Tools Developer*

Aug 2025 – Present

- Own and maintain market data infrastructure and exchange integrations across **12 global exchanges** (primary owner for 9), ensuring high-availability, low-latency data pipelines for trading systems.
- Engineered automation pipelines for exchange configurations, symbol mappings, and monitoring workflows, minimizing manual intervention and strengthening system reliability.
- Validated tick-level market data, corporate actions, and instrument mappings, eliminating inconsistencies across quantitative trading pipelines.
- Enhanced internal quantitative tooling including **PnL systems and C++ alpha frameworks**, accelerating strategy validation and reducing research-to-production latency.
- Led exchange onboarding initiatives, coordinating with quantitative researchers and engineering teams to align infrastructure with trading requirements.

SEARCE Inc. | *Software Engineer*

Jan 2024 – Aug 2025

- Created an automated refactoring system using **Go and prompt engineering**, cutting transformation time from **4 days per lambda to 1 day** and boosting productivity **4x** across Go, Python, and Java codebases.
- Architected a **cloud-agnostic interface-driven system** to standardize AWS Lambda transformations, enabling reusable and scalable deployments across environments.
- Delivered a **production-grade RAG system over large-scale stock market data**, exposing **30+ backend APIs in 22 days** for real-time conversational analytics.
- Streamlined observability pipelines, bringing incident response time down from **2 hours to under 5 minutes (97% improvement)** and improving system uptime.
- Directed development of internal tooling and AI systems, partnering with cross-functional teams and stakeholders to ensure timely delivery and production readiness.
- Analyzed large-scale traffic datasets using **H3 indexing and machine learning**, identifying accident-prone zones and contributing to predictive road safety systems.

PROJECTS

Audio Personality Emulator (APE) | *Python, Librosa, Scikit-learn*

- Developed an audio personality emulation system using MFCC feature extraction and regression models to learn and reproduce user-specific voice characteristics.
- Processed and modeled audio sequences for personalized voice synthesis, exploring extensions with generative models for realistic output.

TECHNICAL SKILLS

Languages & Frameworks: Python • C++ • Go • PyTorch • LangChain • HuggingFace • FastAPI • SQL • REST APIs **AI/ML & Quant:** LLMs • RAG • Fine-tuning • NLP • Prompt Engineering • Model Quantization • ONNX • Statistical Modeling • Time Series Analysis • Risk Modeling • Docker • Git

ACHIEVEMENTS

IMPACT Hackathon Runner-Up (2022) Built IoT + computer vision glasses for visually impaired navigation. • **Niti Vishleshak Case Study, IIM Bangalore (2021)** 2nd Place among 735 teams & 1,500+ participants. • **Vice President, Cultural Committee** Led cross-functional events & managed 50+ member team. • **Tech Lead, Internship Program** Mentored interns and drove delivery of 5+ projects.
